                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes the novel plasmids pTPT3 and pCRY4, isolated from Corynebacterium glutamicum DSM 5816. pTET3 contains about 27.8 kb; includes a replication region of 4539 bp (1) and a 7136 bp antibiotic resistance region (6) containing the teth gene (resistance to tetracycline) and the aadA gene (resistance to streptomycin and spectinomycin. pCRY4 contains about 48 kbp and includes a replication region of 1856 bp (4). Restriction maps and sequences for (1), (4) and (6) are reproduced. Composite plasmids derived from pTET3 and pCRY4 are used to produce strains of coryneform bacteria that produce vitamins (especially D-panthothenic acid); nucleotides, or L-amino acids (particularly lysine and threonine), which are useful in animal nutrition; the food and pharmaceutical industries, and human medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New plasmids pTET3 and pCRY4, and their composites, useful for expressing genes in coryneforms for production of amino acids, vitamins and nucleotides

Expression plasmids based on pTET3 or pCRY4 provide high productivity and have unexpectedly good compatibility with known plasmids. This sequence represents a DNA sequence containing a fragment which encodes the Corprebacterium glutamicum LP-6 tetR, tetA and aadA proteins described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; antidiated to antidiament; antibacterial; antifungal; antirheumatic; antithyroid; antidiaria; gene therapy; cancer; proliferative disorder; hypotrension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria, autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal heemoglobinuia; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               06-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAC12754;
```

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT prinade ODNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

Claim 1; SEQ ID 16829; 71pp + CD-ROM; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAH51601 represents a human genomic nucleotide sequence comprising sbg1, 934665, sbg2, 935017 and 935018 nucleic acid sequences located on the human chromosome 13431 acus. The nucleotide sequences contrain biallelic markers and polymorphisms. Sequences AAH51602 - AAH51626 and AAB62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and protein products. AAH51631 and AAB62916 - AAB65918 represent 935018 cDNA sequences and protein products. Primers AAH5163 - AAH51699 are used to sociate sbg1 cDNAs, while sbg1 exons from different primates are represented by sequences AAH51642 - AAH51699. Nucleotide sequences of amplicons which comprise biallelic markers located on the chromosome 13431-433 locus are represented in AAH51700 -AAH51817. Biallelic markers
cDNA sequences have been obtained, the full 5' UTR is rarely included.
5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotides comprising sequences from sbgl and g35018 biallelic markers are used for genotyping and detecting schizophrenia or bipolar disorder and predisposition to these disorders -

are represented in the sequences by degenerate/undefined base codes. PCR the Invention. The bialibelic marker containing nucleotide sequences of the Invention. The bialibelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a bialibilic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region D-related bialibilic marker in a biological sample from single or multiple subjects. By determining the frequency of a bialibilic marker in a population an association between a genotype and a trait, a haplotype and a trait can be detected. The sequences can be used to determine a predisoposition to or early onset of schizophrenia or bipolar disorder or a beneficial response to or side effects related to treatment against schizophrenia or bipolar disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human schizophrenia associated gene g35030 and biallelic markers Al-A71.

This partial cDNA clone, termed TOBPPO6, encodes a polyphenol oxidase (PPO) polypeptide of tobacco (see also AAM97990). The clone was obtained by PCR amplification of young tobacco leaf cDNA using primers (see AAX24708-12) based on conserved copper binding sites of plant PPOs, and identified on the basis of homology to known plant PPO genes. PPO is the major enzyme responsible for browning and spoilage of fruits and vegetables after damage or injury. Sense PPO nucleic acids can be used to increase the levels of PPO in a plant. Optionally modified sense sequences and antisense sequences can be used to reduce PPO levels (by co-suppression in the case of sense sequences). Transgenic plants including antisense PPO sequences, and a plant vaccine including a nucleic acid encoding banana, tobacco or pineapple PPO or an antisense sequence are
                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid encoding polyphenol oxidase from banana, tobacco and pineapple - useful for, e.g. increasing levels of the enzyme expression, which is responsible for browning and spoilage of fruits after injury or damage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAX30724 to AAX30946 represent genomic DNA sequences isolated from Streptococcus pneumoniae strain 0100993. These genomic DNA sequences encode the novel proteins given in AAY11114 to AAY11367. The proteins, isolated from Streptococcus pneumoniae, can be used in vaccines against streptococcal infections and in assays for identifying compounds that inhibit or activate the activity of the proteins. The antagonists can be used to treat an individual having need to inhibit a bacterial protein. Vectors expressing the proteins can be used to induce a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                            g
```

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (qil4732114 qipl48129072.1), a copy-number of pMD42 (qil4732114 qipl48129072.1), a copy-number of pMD42 (qil4732114 qipl48129072.1), a copy-number of pMD42 complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The

adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb]ART29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into adaptorent E. coli XL10-Gold (Stratagene) cells and selected for ampleillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 (bases 1 to 1301)

Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the cDNA with an adaptor specific primer, and the resulting PCR product subcloned into pAMPl0 by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not David Krizman, "Inharry was constructed by

Plasmid pTC0113; transgenic Brassica plant; transformation event; male-sterility gene; tobacco; PCR primer; probe; ss. PCR primer MDB355 to amplify a fragment of pTCO113. Chimeric - Bacillus amyloliquefaciens. Chimeric - Nicotiana tabacum. ž BP. 26-OCT-2000; 2000WO-EP10680. (AVET) AVENTIS CROPSCIENCE 99US-0430497 De Beuckeleer M; 21 AAD06991 standard; DNA; WPI; 2001-300517/31. WO200131042-A2 29-OCT-1999; 06-AUG-2001 03-MAY-2001. Weston B, AAD06991; AAD06991

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

SUMMARIES

by of

Transgenic Brassica plants, seeds, cells or tissues, characterized harboring specific transformation events, particularly by presence male-sterility gene, at specific location in its genome -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a nopaline synthase terminator, which is used to create the construct of the invention. The specification describes a nucleic acid construct, comprising an expression cassette containing a cauliflower mosaic virus (CaMV) 35S promoter, a maize alcohol dehydrogenase intron, a DNA molecule encoding an insecticidal cry lAb protein toxin and a NOS (nopaline synthase) terminator in operable linkage. The nucleic acid constructs are useful for producing transgenic plants such as maize, wheat, barley, sorghum and rice. Preferably, maize plants such as field corn, sweet corn, white
                                                      The present invention relates to a transgenic Brassica plant or its seed, cells or tissues, characterised by harbouring a specific transformation event, particularly by the presence of a male-sterility gene, at a specific location in the Brassica genome. Transgenic Brassica plant is useful for producing a hybrid seed by crossing the transgenic plant with a male-fertile Brassica plant and harvesting the hybrid seed from the transgenic Brassica plant and harvesting the hybrid seed from the primer MDB355 used to amplify a fragment of plasmid pTCO113. The primer ls also used as a probe. The amplified fragment comprises coding region of barnase from

The present invention relates to transgenic maize seed for hybrid maize plant production, comprising an expression cassette linked operably with constitutive Cauliflower mosalc virus (CaMV) 35s promoter, an alcohol dehydrogenase intron, a DNA encoding an insecticidal Bacillus thuringiaensis (B1 Crybab toxin and a nopaline synthetase (NOS) terminator. The transgenic maize seed is used in maize cultivation methods for propagating hybrid maize seeds and for growing hybrid maize plants. The maize is also used in foodstuffs preparation for animal or human consumption. The inbred maize line NP948 of the invention has creduced level of fungal toxins, hence suitable for foodstuffs preparation. Yield is high. Plant health is improved due to reduced stalk rot. Grain test weight is high and the rate of grain dry down is reduced. The present sequence is nopaline synthetase terminator of phosphinothricin acetyl transferase (PAT) gene expression cassette.
                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nopaline synthetase;
corn, silage corn or popcorn are produced. The transgenic maize is used for preparing food materials with reduced levels of fungal toxins, e.g. aflatoxins. The transgenic plants express a baculovirus crystal protein toxin, which is effective against Lepidopteran insects at relatively high levels and further provides resistance to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel transgenic maize seed for hybrid maize plant production, comprising expression cassette linked operably with CAMV 35S promoter, alcohol dehydrogenase intron, insecticidal CrylAb toxin gene or NOS terminator
                                                                                                                                                                                                                                                     Gaps

                                                                                                                                            ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to maize inbred line R412H which comprises a nucleic acid construct with two cassettes, which are transcribed in the same direction. The expression cassette comprises a Cauliflower mosaic virus (CaMV) 35S constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a Bacillus thuringiensis (Bt) crystal 1Ab (Crylab) toxin or phosphinothricin acetyl transferase (PAT) and a nopaline synthase (NoS) terminator functional in plants. The maize inbred line R412H is useful for producing corn with reduced levels of toxins (e.g. the fungal materials for human or animal consumption, e.g. sweet corn for packaging or fresh use as human food, or grain or silage made from field corn. The present sequence is 3' NoS terminator of Pat gene expression cassette, which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                 Maize; expression cassette; 35S promoter; alcohol dehydrogenase intron; crystal 1Ab; Cry1Ab toxin; phosphinothricin acetyl transferase; PAT; nopaline synthase; NOS terminator; aflatoxin; food material; sweet corn; human food; Adhl-1S; ds.
                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New maize (Zea mays) inbred line R412H (ATCC 209675), useful for producing corn with reduced levels of toxins (e.g. the fungal aflatoxin) and for preparing food materials for human or animal

The specification describes seed and plants of maize inbred line R660H.

The seed comprises two cassettes. The first cassette comprises a cauliflower mosaic virus (cawn) 355 constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a CrylAb protein, and a terminator functional in plants. The second cassette comprises a Cawn 355 promoter which functions in plant cells operably linked to a maize plohol dehydrogenase intron, a DNA sequence of a gene encoding for phosphinothricin acetyl transferase, and sequence of a gene encoding for phosphinothricin acetyl transferase, and the same direction and the nucleic acid construct is incorporated into the same direction and the nucleic acid construct is incorporated into the seed's genome on chromosome 8 and near position 117, between markers in the same directs since they express the protein CrylAb in high levels, and also exhibit resistance to non-selective herbicide glufosinate. The transgenic maize is suited for preparation of food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

```
The specification describes seed and plants of maize inbred line R660H.
The seed comprises two cassettes. The first cassette comprises a cauliflower measile virus (CaWY) 355 constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a CrylAb protein, and a terminator functional in plants. The second cassette comprises a CaNW 355 promoter which functions in plant second cassette comprises a CaW 355 promoter which functions in plant sequence of a gene encoding for phosphinothricin acetyl transferase, and a terminator functional in plant. The two cassettes are transferase, and the same direction and the nucleic acid construct is incorporated into the seed's genome on chromosome 8 and near position 117, between markers 1813 and UMC150a. The maize plants and seeds exhibit resistance to lepidopteran insects since they express the protein CrylAb in high levels, and also exhibit resistance to non-selective herbicide glufosinate. The transgenic maize is sulted for preparation of food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Maize; inbred line R660H; 35S constitutive promoter; CrylAb protein; alcohol dehydrogenase; phosphinothricin acetyl transferase; chromosome 8; 21B3; UMC150a; Lepidoptera; glufosinate; sweet corn; fungal toxin; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                materials for human or animal consumption e.g. sweet corn for packaging or fresh use as a human food, or grain or sliage made from fleal corn, containing reduced levels of fungal toxins. The present sequence represents a 3 terminator from nopaline synthetase, which is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel seed of maize inbred line R660H, useful for producing inbred maize plants which on crossing with other different maize plants produce hybrid maize seeds and plants having resistance to insects and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleotide sequence of a 3' terminator from nopaline synthetase.

combinations of introns and 5' and 3' non-translated genetic elements.

The vectors comprise a promoter sequence, a 5' non-translated leader sequence (isolated from genes of wheat fructose-1,6-bisphosphatase (bp), chlorophyll a/b binding protein, heat shock protein (hsp), peroxidase, rice beta-tubulin (btub) or amylase), an intron (isolated from genes of rice actin, sucrose synthase, phenylanine ammonia lyase, amylase or maize hsp), a DNA coding sequence and a 3' non-translated terminator sequence (isolated from genes of wheat hsp, ubiquitin, fbp, rice glutelin, lactate dehydrogenase or btub). They are used to produce transgenic plants showing resistance to microbial and fungal disease, herbicide tolerance, increased yield and nutritional enhancement. The the T-DNA in Agrobacterium tumefaciens. It is used in the construction of recombinant expression vector pMON19433.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the Nos terminator sequence. The terminator can be used in the production of barley endoxylanase plasmids. The invention relates to a nucleotide sequence encoding the barley endoxylanase content of relates to a nucleotide sequence encoding the barley endoxylanase is relates to a nucleotide sequence encoding the barley endoxylanase is protein. The endoxylanase has a molecular weight of 62kD. Endoxylanase is a xylan-degrading enzyme produced by plants for example during germination of cereal grain. Xylan is a constituent of plant cell walls, and its degradation is very important in commercial processes that use cereal grains, such as beer brewing. A nucleic acid construct comprising the endoxylanase nucleotide sequence, a heterologous signal peptide and a plant can be enhanced through transformation of the plant using the barley endoxylanase nucleotide sequence. The barley endoxylanase concleotide sequence. The barley endoxylanase confoxylanase in plant cells, permitting enhanced degradation of cell wall sylan is particularly important in fermentation processes that rely on fermentable sugars and nutrients provided by degradation of cereal grains. Barley malt, wheat malt, and person or cell and the plant wall are ordered grains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cereal grain malt are primary sources of required nutrients in the brewing process. When brewing beer, the amount of starch and protein degradation during malting and mashing greatly impacts the quality of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid sequence encoding barley endoxylanase, for expressing enhanced amounts of endoxylanase in plant cells, useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                            The present sequence represents a nopaline synthase terminator, which is used to create the construct of the invention. The specification describes a nucleic acid construct, comprising an expression cassette containing a cauliflower mosalcutt, comprising an expression cassette alcohol dehydrogenase intron, a DNA molecule encoding an insecticidal operable protein toxin and a NOS (nopaline synthase) terminator in producing transgence plants such as maize, wheat, barley, sorghum and producing transgence plants such as field constructs are useful for producing transgence plants such as field corn, sweet corn, white corn, slidge corn or popocon are produced. The transgenic maize is used for preparing food materials with reduced levels of fungal toxins, e.g. aflatoxins. The transgenic plants express a baculovirus crystal protein toxin, which is a effective against lepidopteran insects at
                                                                                                                                                         Novel DNA construct comprising an expression cassette having a functional constitutive promoter, operably linked to a maize alcohol dehydrogenase intron, gene encoding Cry 1Ab protein and a terminator

The present invention relates to transgenic maize seed for hybrid maize blant production, comprising an expression cassette linked operably with constitutive Cauliflower mosaic virus (CaMV) 35S promoter, an alcohol dehydrogenase intro, a DNA encoding an insecticidal bacilius thuringiensis (Bt) CrylAb toxin and a nopaline synthetase (NoS) terminator. The transgenic maize seed is used in maize cultivation methods for propagating hybrid maize seeds and for growing hybrid maize human consumption. The inbred maize line NP948 of the invention has reduced level of fungal toxins, hence suitable for foodstuffs preparation. Yield is high, Plant health is improved due to reduced stalk rot. Grain test weight is high and the rate of grain dry down is reduced. The present sequence is nopaline synthetase terminator of Bt kurstaxi expression cassette.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Maize; expression cassette; 35S promoter; alcohol dehydrogenase intron; crystal lAb; CrylAb toxin; phosphinothricin acetyl transferase; PAT; nopaline synthase; NOS terminator; aflatoxin; food material; sweet corn; human food; Adhl-15; ds.
                                                                                                                                                                                                                                                                         Novel transgenic maize seed for hybrid maize plant production, comprising expression cassette linked operably with CAMV 35S promoter, alcohol dehydrogenase intron, insecticidal CrylAb toxin gene or NOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The specification describes seed and plants of maize inbred line R660H.

The seed comprises two cassettes. The first cassette comprises a cauliflower measalc virus (CaW) 355 constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a CrylAb protein, and a terminator functional in plants. The second cassette comprises a CaMV 355 promoter which functions in plant second cassette comprises a CaMV 355 promoter which functions in plant cappably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding for phosphinothricin acetyl transferase, and a terminator functional in plant. The two cassettes are transferibed in the same direction and the nucleic acid construct is incorporated into the seed's genome on chromosome 8 and near position 117, between markers 1813 and UNC150a. The maize plants and seeds exhibit resistance to lepidopteran insects since they express the protein CrylAb in high levels, and also exhibit resistance to non-selective herbicide capparation of food
                                                                                                                                                                                                                                                                                materials for human or animal consumption e.g. sweet corn for packaging or fresh use as a human food, or grain or sliage made from field corn, containing reduced levels of fungal toxins. The present sequence represents a 3 terminator from nopaline synthetase, which is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Maize; inbred line R660H; 35S constitutive promoter; CrylAb protein; alcohol dehydrogenase; phosphinothricin acetyl transferase; chromosome 21B3; UMC150a; Lepidoptera; glufosinate; sweet corn; fungal toxin; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The specification describes seed and plants of maize inbred line R660H. The seed comprises two cassettes. The first cassette comprises a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                              The present invention relates to maize inbred line R412H which comprises a nucleic acid construct with two cassettes, which are transcribed in the same direction. The expression cassette comprises a Caulillower mosaic virus (CaMV) 35S constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a pacillus thuringiensis (H) crystal IAD (CrylAD) toxin or phosphinothricin acetyl transferase (PAT) and a nopaline synthase (NOS) terminator functional in plants. The maize inbred line R412H is useful for producing corn with reduced levels of toxins (e.g. the fungal aflatoxin). This maize line is particularly useful for preparing food materials for human or animal consumption, e.g. sweet corn for corn. The present sequence is 3' NOS terminator of Btk expression cassette, which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein;

cauliflower mosalc virus (CaMV) 35S constitutive promoter operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding a Crylab protein, and a terminator functional in plants. The second cassette comprises a CaMV 35S promoter which functions in plant cells operably linked to a maize alcohol dehydrogenase intron, a DNA sequence of a gene encoding for phosphinothricin accepty transferase, and a terminator functional in plant. The two cassettes are transcribed in the same direction and the nucleic acid construct is incorporated incompleted and a terminator functional in plant. The two cassettes are transcribed in the same direction and the nucleic acid construct is incorporated incompleted and a terminator functional in plant. The two cassettes are transcribed in the same direction and the nucleic acid construct is incorporated incompleted and a same acid and near position 17, between markers in pladopteran insects since they express the protein Crylab in high landing and also exhibit resistance to non-selective herbicide quiosant also exhibit resistance to non-selective herbicide quiosant and an animal consumption e.g. sweet corn for packaging or fresh use as a human food, or grafin or silage made from field corn, containing reduced levels of fungal toxins. The present sequence represents a 3' terminator from nopaline synthetase, which is used to produce transgenic maize of the invention.

Visual identification of transgenic plant material - from production of carotenoid pigment encoded by cassette containing Erwinia phytoene synthase gene, useful for selecting material for The 3' nontranslated region (AAT66536) of the nopaline synthase gene can be cloned from binary vector pBI121 (Clontech). It contains sequences that in plant cells result in the termination of transcription and additional sequences that when transcribed into RNA result in the addition of a poly-A tract to the 3' end of the RNA. It is a preferred component of pETO203 (ATCC 97282), a Example; Page 37; 62pp; English. regeneration

plastid targetting signal (AAT66535), a phytoene synthase gene (AAT66535), a phytoene synthase gene (AAT66535) fused to the Erwinia herbicola Transgenic plant cells and tissues are identified by the appearance of orange colour. binary vector used in a method for the visual identification of transgenic plant material. The vector includes an expression cassette comprising the tomato E0 promoter (see also AAT66533), 88888888888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence 8, Apsequence 18, A sequence 14, Apsequence 4, Apsequence 4, Apsequence 3, Apsequence 3, Apsequence 3, Apsequence 6, Apsequence 17, Assequence 11, Assequence 16, Apsequence 16, Apsequence 16, Apsequence 9, Apsequence 9, Apsequence 16, Apsequence 9, Apsequence 16, Apsequence 16, Apsequence 16, Apsequence 9, Appequence 9,

Sequence 3, Application US/08475975

Patent No. 6002070

GENERAL INFORMATION:
APPLICANT: D'HALLIN, Kathleen
APPLICANT: COBEL, Elke
TITLE OF INVENTION: PROCESS FOR TRANSFORMING
TITLE OF INVENTION: MONOCOTYLEDONOUS PLANTS
NUMBER OF SEQUENCES: 5
CORRESPONDENCE SISS:
ADDRESSEE: Burns, Doane, Swecker & Mathis
STREET: George Mason Bldg., Washington & Prince Sts.
CITY: Alexandria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COMPOTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
FILING DATE: 08-JUL-1991
PRIOR APPLICATION DATA:
APPLICATION DATA:
APPLICATION NUMBER: US 08/064,121
FILING DATE: 23-JUN-1993
ATTORNEY AGENT INFORMATION:
NAME: MCGOWAN: MAIOCIM K.
REGISTRATION NUMBER: 39,300
REFERENCE/DOCKET NUMBER: 39,300

//Index="Vector: pealoabcil; Site_1: HindIII; Site_2:
HindIII; Rice is one of two most popular grains in the
world. Half of the world population especially those
inhabiting highly populated areas of the humid tropics
and subtropics, rely on rice as their primary source of
carbohydrate. Monocotyledonous rice is a diploid plant
(2n=4) with a haploid genome equivalent of 431 Mbp
(Arumuganathan and Earle, 1991. The relatively small
genome of rice, three times larger than that of
Arabidopsis, makes it suitable for genomic studies. In
order to facilitate positional cloning, physical mapping
and genome sequencing of rice, we have constructed a BAC
library from Oryza sativa, Nipponbare variety. The
library contains 36 864 clones with an average insert size
of 128.5 Kp providing 10.9 haploid genome equivalents. The
deep coverage allows the isolation a particular sequence
with a probability of 99.9 %. Two high density filters,
each containing 18,432 clones (doubly spotted), represent
the whole library for colony screening."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Caenorhabditis elegans.

Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGGCCATATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCGAGGGGGCGCAATG-GT(30)BN-3'
(where B = A, C; or G and N = A, C, G or T). Average
insert size 1.75 kb (range 0.9-4.0 kb): 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC
